

With our capability to create individualized battery systems, we can respond with a high degree of flexibility to a wide range of customer needs. With our modular Webasto design approach, we successfully develop tailor-made or “build-to-print” battery solutions for both passenger and commercial vehicles according to customer specifications.

Our product and process development, additional options of in-house prototyping, electronics development and manufacturing as well as our test center ensure a reduced time-to-market from predevelopment to the start of series production.

## Key Facts:

- Individual battery development or build-to-print projects with integration of directed or provided parts
- Production close to customer – development of new plants optional
- Competencies and know-how from other Webasto products, projects and R&D are incorporated to build synergies and ensure outstanding quality and optimal time-to-market
- We have a wide variety of products in development and production
- We have a high variance in performance, quantity, cooling etc.
- We can represent all dimensions and topics (large or small quantities, air or water cooling, etc.)
